

**LESSON**  
**5.2****Study Guide**

For use with the lesson "Solve Inequalities Using Multiplication and Division"

**GOAL** Solve inequalities using multiplication and division.**Multiplication Property of Inequality**

Multiplying each side of an inequality by a *positive* number produces an equivalent inequality.

Multiplying each side of an inequality by a *negative* number and *reversing the direction of the inequality symbol* produces an equivalent inequality.

**EXAMPLE 1** Solve an inequality using multiplication

Solve the inequality. Graph your solution.

a.  $\frac{x}{7} > 3$

b.  $\frac{x}{-2} \leq 5$

**Solution**

a.  $\frac{x}{7} > 3$

Write original inequality.

$7 \cdot \frac{x}{7} > 7 \cdot 3$

Multiply each side by 7.

$x > 21$

Simplify.

The solutions are all real numbers greater than 21. Check by substituting a number greater than 21 in the original inequality.

b.  $\frac{x}{-2} \leq 5$

Write original inequality.

$-2 \cdot \frac{x}{-2} \geq -2 \cdot 5$

Multiply each side by  $-2$ . Reverse inequality symbol.

$x \geq -10$

Simplify.

The solutions are all real numbers greater than or equal to  $-10$ . Check by substituting a number greater than or equal to  $-10$  in the original inequality.

**Exercises for Example 1**

Solve the inequality. Graph your solution.

1.  $\frac{m}{4} < -3$

2.  $\frac{n}{-6} \leq 4$

3.  $\frac{p}{-1.2} > -8$

**LESSON**  
**5.2****Study Guide** *continued**For use with the lesson "Solve Inequalities Using Multiplication and Division"***EXAMPLE 2** **Solve an inequality using division****Solve  $6x > -36$ .****Solution** $6x > -36$  Write original inequality. $\frac{6x}{6} > \frac{-36}{6}$  Divide each side by 6. $x > -6$  Simplify.**Exercises for Example 2****Solve the inequality.**

4.  $-3x \leq 9$

5.  $18 \geq 9x$

6.  $6x < 12$

**EXAMPLE 3** **Solve a real-world problem****A library has \$180 to buy new books. The books cost \$9 each. Write and solve an inequality to find the possible number of books that can be bought for the library.****Solution**

The total cost of the books can be at most the amount of money available. Write a verbal model for the situation. Then write an inequality.

Books  $\cdot$  Cost per book  $\leq 180$

$b \cdot 9 \leq 180$

$b \leq 20$

The library can afford to buy at most 20 books.

**Exercises for Example 3**

- In Example 3, suppose the library has \$120 to spend and that books cost \$8 each. Write and solve an inequality to find the possible number of books the library can buy.
- Three sisters want to buy a PDA for their father for Father's Day. The least expensive PDA in the store is \$360. Write and solve an inequality to find the least amount of money each girl would have to contribute, if each contributes an equal amount.
