## Graph Polynomial Functions

## QUESTION How can you use a graph to check your work with polynomials?

EXAMPLE Check a sum or difference of polynomials
Tell whether the sum or difference is correct.
a. $\left(x^{2}-2 x+3\right)+\left(2 x^{2}+4 x-5\right) \stackrel{?}{=} 3 x^{2}+2 x-2$
b. $\left(x^{3}+x+1\right)-\left(5 x^{3}-2 x+7\right) \stackrel{?}{=}-4 x^{3}-x-6$

## STEP 1 Enter expressions

Let $y_{1}$ equal the original expression.
Let $y_{2}$ equal the sum.
a.

```
Y1日(X2-2X+3)+(2 X2
+4X-5)
Y2F3 X2+2X-2
Y3=
Y4=
Y5=
Y6=
```

## STEP 2 Graph expressions

For $y_{1}$, choose a normal graph style.
For $y_{2}$, choose a thicker graph style.
a.

b.
Y1 ${ }^{\text {F }}\left(X^{3}+X+1\right)-\left(5 X_{3}-\right.$
$2 X+7$ )
Y2F-4 $X^{3}-X-6$
$\mathrm{Y}_{3}=$
Y4 $=$
$Y_{5}=$
Y6=

## STEP 3 Analyze graphs

a. The thick curve coincides with the thin curve, so the sum is correct.
b. The thick curve deviates from the thin curve, so the difference is incorrect.

## PRACTICE

Find the sum or difference. Use a graphing calculator to check your answer.

1. $\left(6 x^{2}+4 x-1\right)+\left(x^{2}-2 x+2\right)$
2. $\left(3 x^{2}-2 x+1\right)-\left(4 x^{2}-5 x+1\right)$

Tell whether the sum or difference is correct. Correct any incorrect answers.
3. $\left(3 x^{2}-2 x+4\right)+\left(-x^{2}+3 x+2\right) \stackrel{?}{=} 2 x^{2}+x+6$
4. $\left(-4 x^{2}-5 x-1\right)-\left(-5 x^{2}+6 x+3\right) \stackrel{?}{=}-9 x^{2}+x+2$
