$\qquad$

GOAL Factor trinomials of the form $x^{\mathbf{2}}+b x+c$.

## EXAMPLE 1 Factor when band care positive

Factor $x^{2}+10 x+24$.

## Solution

Find two positive factors of 24 whose sum is 10 . Make an organized list.

| Factors of 24 | Sum of factors |
| :---: | :---: |
| 24,1 | $24+1=25$ |
| 12,2 | $12+2=14$ |
| 8 | $\boldsymbol{x}$ |
| 8 | $8+3=11$ | correct sum

The factors 6 and 4 have a sum of 10 , so they are the correct values of $p$ and $q$.
$x^{2}+10 x+24=(x+6)(x+4)$
CHECK $\quad(x+6)(x+4)=x^{2}+4 x+6 x+24 \quad$ Multiply binomials.

$$
=x^{2}+10 x+24 \checkmark \quad \text { Simplify } .
$$

## EXAMPLE 2 Factor when $b$ is negative and $\boldsymbol{c}$ is positive

Factor $w^{2}-10 w+9$.
Solution
Because $b$ is negative and $c$ is positive, $p$ and $q$ must be negative.

| Factors of 9 | Sum of factors |
| :---: | :---: |
| $-9,-1$ | $-9+(-1)=-10$ |
| $-3,-3$ | $-3+(-3)=-6$ |
| $\boldsymbol{x}$ correct sum |  |

The factors -9 and -1 have a sum of -10 , so they are the correct values of $p$ and $q$.
$w^{2}-10 w+9=(x-9)(x-1)$

## Exercises for Examples 1 and 2

Factor the trinomial.

1. $x^{2}+10 x+16$
2. $y^{2}+6 y+5$
3. $z^{2}-7 z+12$
$\qquad$

## EXAMPLE 3 Factor when $b$ is positive and $\boldsymbol{c}$ is negative

Factor $k^{\mathbf{2}}+\mathbf{6 x} \mathbf{- 7}$.

## Solution

Because $c$ is negative, $p$ and $q$ must have different signs.

| Factors of 7 | Sum of factors | $x$ |
| :---: | :---: | :---: |
| $-7,1$ | $-7+1=-6$ |  |
| 7, -1 | $7+(-1)=6$ |  |

The factors 7 and -1 have a sum of 6 , so they are the correct values of $p$ and $q$. $k^{2}+6 k-7=(x+7)(x-1)$

## Exercises for Example 3

## Factor the trinomial.

4. $x^{2}-10 x-11$
5. $y^{2}+2 y-63$
6. $z^{2}-5 z-36$

## EXAMPLE 4 Solve a polynomial equation

Solve the equation $h^{2}-4 h=21$.

## Solution

| $h^{2}-4 h$ | $=21$ |  | Write original equation. |
| ---: | :--- | ---: | :--- |
| $h^{2}-4 h-21$ | $=0$ | Subtract 21 from each side. |  |
| $(h+3)(h-7)=0$ | Factor left side. |  |  |
| $h+3=0$ | or | $h-7=0$ | Zero-product property |
| $h=-3$ | or | $h=7$ |  |

The roots of the equation are -3 and 7 .

## Exercise for Example 4

7. Solve the equation $x^{2}+30=11 x$.
