## Use the Vertex Formula

Consider the graph of $y=-2 x^{2}-8 x-2$
a. Write the equation of the axis of symmetry.

$$
\begin{aligned}
& a=-\quad b= \\
& x=-\frac{b}{2 a} \\
& x=
\end{aligned}
$$

b. Find the coordinates of the vertex.

$$
\begin{aligned}
& y=-2(\quad)^{2}-8(\quad)-2 \\
& y=
\end{aligned}
$$

The coordinates of the vertex are ( , )
c. Identify the vertex as a maximum or minimum.

This parabola has a $\qquad$
d. Graph the function.
